

Please amend the claims as follows:

- 
1. **(Amended)** A polyolefin resin molding composite comprising
a surface layer and a foam layer, or a surface layer, a foam layer, and a base member,
the foam layer being produced by fusion bonding thermoplastic expanded resin
particles to one another by molding, the thermoplastic expanded resin particles comprising
a core that is made of a crystalline thermoplastic resin and is in an expanded state, and a
polyethylene resin coat covering the core that is in a substantially non-expanded state,
wherein the foam layer has a compressive hardness of from 0.05 to 0.7 MPa; and
the surface layer comprising a thermoplastic synthetic resin having a melting point
of 5°C or more higher than a melting point of the polyethylene resin constituting the coat
of the particles.
-

- 
3. **(Amended.)** The polyolefin resin molding composite according to claim 1, wherein the
polyethylene resin coat comprises an ethylene polymer having a melting point lower than
the crystalline thermoplastic resin constituting the core, or an ethylene polymer that
substantially exhibits no melting point.
-

- 
5. **(Amended.)** The polyolefin resin molding composite according to claim 3, wherein a void
fraction of the foam layer is 1 to 40 %.
6. **(Amended.)** The polyolefin resin molding composite according to claim 3, wherein the
thermoplastic synthetic resin constituting the surface layer is a polyolefin resin.
